

# The Museum of Organic History

*Official Museum Guide 2104*

*Aerial view of  
the earth in  
the year 2048*

## The age before advancements

While walking through this museum you will get a glimpse of the past that humanity has left behind. We will go into detail about how society used to live before the scientific advancements that lead to the way we live our lives today. Humans lived drastically different in the past than we live today. This picture taken above was one of the last few aerial photographs of the earth before the modern era. This is a glimpse back in time when the world was still green!

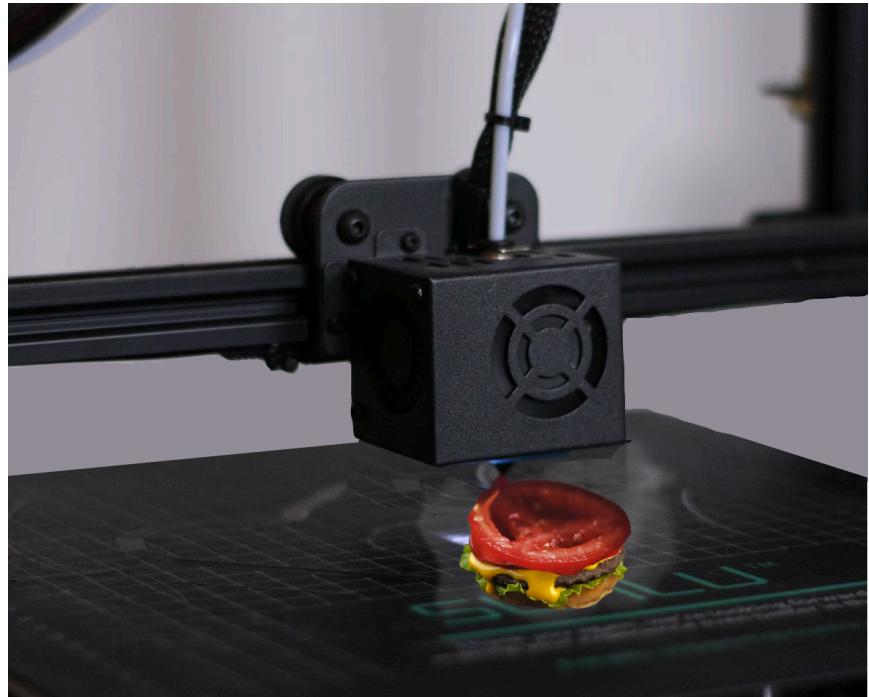

---

## Comparison

“Comparison” is the first exhibit in the gallery. This exhibit uses art forms to tell the contrasting story between the world we live in now and the world humanity used to live in. This collection touches on topics like, genetic advancements, the population boom of the 2050’s, deforestation and the extinction of livestock and other animals. The first topic that will be touched on is the genetic advancements that led to the invention of advanced 3D printers that are able to use a database of DNA samples from every organic matter known to mankind in order to print and replicate the organic matter.

*This is an image of one of the organic 3D printers as stated above. This particular model was invented in 2051.*

---

## Let's take a look at one of the pieces of art that is displayed in the first exhibit !

This artwork was created by using a database of an old collection of images that depicts landscapes and forests. Then the images were run through a generative AI which produced the images above. This artwork was released by an unnamed artist as part of the deforestation protests of the late 2060's. The protester's goal was to bring awareness to the continuing deforestation that occurred throughout the world to make room for the rise in population which was ultimately due to the abundance of genetically manufactured "organic" products or M.O.P for short. Unfortunately the protesters were not heard leading to the eventual extinction of almost all naturally grown trees, shrubs and other foliage.

---

*This image, created in 2081, is a piece of art showcased in this exhibit. The artist wanted to play on the absurdity of what it would look like for livestock to live in today's age.*

## Evolution

“Evolution” is the second exhibit showcased in the gallery. This exhibit houses a collection of artworks that showcase the evolution of mankind. This selection more specifically is attributed to the evolution of an organic free way of life. Advancements in genetically manufactured products changed the economic scene as a large percentage of the population gravitated to these products as they were the more affordable and cruelty free option. This eventually led to the bankruptcy of many farms across the country. Many farmers unable to make a living used all of the resources they once sold. During the year 2067 the last reported ranch was sold to make room for more housing units. By the year 2074 more than 65% of wildlife both creatures and plants, were declared extinct.

## \*SPONSORS\*

This glimpse into the Museum of Organic History would not be possible without our sponsors. We dedicate this guide to the many companies that give their generous support of our museum. Your sponsorship has been instrumental in enabling us to continue our mission of sharing the historical and artistic heritage that inspires and educates our community!

- Bio-synth INC.
- Quantum Tech.
- EcoFusion Markets
- and many more!

We hope you enjoyed this brief glance at this fascinating world we live in and what it used to look like. We hope this guide sparks curiosity and prompts you to come and visit the whole museum! We can't wait to see you here!
